### **Key idea:**

*Principally we believe there should not be any unemployed people if it is being addressed properly. Unless we make a little effort on the discussion of this issue it is not possible to get any desirable results by our struggle. To discuss the issue of unemployment we have to consider the reason for getting employment. Structure of the present day society and its systematic development due to development of science and technology should be discussed. With the development of science the structure of the society and its requirements has been changed. With this change different services are needed which is not addressed properly. Those possibilities should be found out. The desired results will be expedited if the policy maker of the Government pays attention to these issues.*

Whenever I try to write anything the first issue that strikes to my mind is the unemployment problem. This is a major problem all over the world. Unemployment problem and other problems associated with it have a serious effect on the society. It is quite true that the government of any country is definitely working for it. Without employment or at least to show a little hope for the unemployed people all of our effort will be in vain. Human values/ qualities will definitely be devaluated. I will not extend this part. I hope any one will be able to discuss on this issue. There are also expert persons who can discuss about this problem in a better way.

Before going to discuss unemployment we have to discuss what is the exact reason for getting employment in the society. Whether it is private or government sector there are some professions which have been introduced to provide some value added service to the society. At the early times of our society human movement was restricted over a small sphere. Society was started based on agriculture. To meet different needs few professions arise like priest, teachers, doctors, and gradually this increased to carpenters, barber, cobbler, washer etc. Gradually people belong their properties and also Chowkidar, police, court, lawyer etc came in our society. All these professions were introduced to serve the basic needs of the individual and also of the society at large. So the number of professions strictly depends on the requirements of the society at any time.

Gradually with the development of scientific knowledge the structure of society and also the life of the individual changes significantly. From the village life to urban life and recently at our flat culture so many different necessities arise around us. Food service, gardening, (I will enclose a list at the end) and many other professions are introduced. There are many people who are doing these jobs by their own effort termed as self employment. By self employment basically they are also doing some value added service to our society. But these jobs are not being always recognized by the government and also lack some social status. I have tried to find out different services that a modern society needs. Attempt should be done so that each and every work gets sufficient social status.

To prepare this list/data bank I have taken help of different sources. This data bank has been prepared by surveying the opinion of general people from different sectors, searching from literatures, internet and other sources to specify different needs/trends in these areas. Based on those ideas and including my own experience I have tried to find its feasibilities in our **societies**. The feasibilities may alter from situation to situation. Suggestions of the policy makers of the governments, industries, organization and institutes may also be useful. I also invite them to come up with their opinions to enrich this data bank.

One group may be formed to provide different suggestions and solutions on various problems related to implement of the jobs/business in those areas to solve some of the unemployment problem.

**List of possible job/business areas of our society : (This may be extended gradually)**

(This list has been prepared searching from different sources. Some of the ideas has been introduced by us.)

1. Advertising Agency
2. Arts and Crafts
3. Auto Servicing
4. Beautician Trainer
5. Building Maintenance Service
6. Business Broker
7. Business Consultant
8. Business Website Consultant
9. Carpet/Upholstery Cleaning
10. Cartoonist
11. Caterer
12. Cleaning Service
13. Commercial Photographer
14. Computer Consultant
15. Computer Programmer
16. Computer Repairing
17. Computer Trainer
18. Cooking Guide
19. Courier Service
20. Day-Care for Children
21. Electrical Contractor
22. Event Manager

23. Executive Consultant
24. Financial Planner
25. Fan-Club Manager
26. Gardening Consultant
27. Graphic Designs
28. Health Care Service
29. Home Business Consultant
30. Home Delivery Service
31. Insurance Agent
32. Interior Decorator
33. Jewelry Designer
34. Laundry Service
35. Licensing Agent
36. Loan Broker
37. Logo Designer
38. Magician
39. Massage Therapist
40. Modeling Agent
41. Musician,
42. Newspaper Delivery Service
